This edited book presents scientific results of the 20th IEEE/ACIS International Conference on Software Engineering Research, Management, and Applications (SERA2022) held on May 25, 2022, in Las Vegas, USA. The aim of this conference was to bring together researchers and scientists, businessmen and entrepreneurs, teachers, engineers, computer users and students to discuss the numerous fields of computer science and to share their experiences and exchange new ideas and information in a meaningful way. Research results about all aspects (theory, applications and tools) of computer and information science and to discuss the practical challenges encountered along the way and the solutions adopted to solve them. The conference organizers selected the best papers from those papers accepted for presentation at the conference. The papers were chosen based on review scores submitted by members of the program committee and underwent further rigorous rounds of review. From this second round of review, 12 of the conference's most promising papers are then published in this Springer (SCI) book and not the conference proceedings. We impatiently await the important contributions that we know these authors will bring to the field of computer and information science. This book presents the latest advances in machine intelligence and big data analytics to improve early warning of cyber-attacks, for cybersecurity intrusion detection and monitoring, and malware analysis. Cyber-attacks have posed real and wide-ranging threats for the information society. Detecting cyber-attacks becomes a challenge, not only because of the sophistication of attacks but also because of the large scale and complex nature of today's IT infrastructures. It discusses novel trends and achievements in machine intelligence and their role in the development of secure systems and identifies open and future research issues related to the application of machine intelligence in the cybersecurity field. Bridging an important gap between machine intelligence, big data, and cybersecurity communities, it aspires to provide a relevant reference for students, researchers, engineers, and professionals working in this area or those interested in grasping its diverse facets and exploring the latest advances on machine intelligence and big data analytics for cybersecurity applications. Joshua Gert presents a new account of normative practical reasons and the way in which they contribute to the rationality of action. He argues that, rather than simply "counting in favor of" action, normative reasons play two logically distinct roles--that of requiring action and that of justifying action. Gert's book will appeal to a range of readers interested in practical reasoning in particular, and moral theory more generally. At the dawn of the twenty-fourth century, with colonies spanning fifty star systems, mankind has created the Confederation of Allied Worlds. When trouble erupts, the Confed's solution is swift, savage, and supremely effective: dispatch small teams of elite warriors. Deadly fighters like Tex. . . . As one of the most decorated soldiers in the Confederation's arsenal, Tex has survived covert operations in every steaming hellhole. As a result, he knows more than enough about the Confed's most brutal and amoral activities, which makes him wonder: Is it mere coincidence that all missions assigned to veteran teams seem to be suicide missions? Fortunately, the new assignment doesn't have the markings of a lethal affair. Tex is dispatched to the Ulysses star system, a backwater group of inconsequential planets populated with misfits and malcontents. What he doesn't know is that this lowly cluster secretly harbors perhaps the greatest threat ever faced by the Confederation. Worse yet, the shadowy Protectorate behind the mission intends to make certain Tex does not survive. But Tex hasn't earned his reputation as a well-honed killing machine for nothing. . . .

Terry Copp's tireless teaching, research, and writing has challenged generations of Canadian veterans, teachers, and students to discover an informed memory of their country's role in the Second World War. This collection, drawn from the work of Terry's colleagues and former students, considers Canada and the Second World War from a wealth of perspectives. Social, cultural, and military historians address topics under five headings: The Home Front, The War of the Scientists, The Mediterranean Theatre, Normandy/Northwest Europe, and The Aftermath. The questions considered are varied and provocative: How did Canadian youth and First Nations peoples understand their wartime role? What position did a Canadian scientist play in the

*Allied victory and in the peace? Were veterans of the Mediterranean justified in thinking theirs was the neglected theatre? How did the Canadians in Normandy overcome their opponents but not their historians? Why was a Cambridge scholar attached to First Canadian Army to protect monuments? And why did Canadians come to commemorate the Second World War in much the same way they commemorated the First? The study of Canada in the Second World War continues to challenge, confound, and surprise. In the questions it poses, the evidence it considers, and the conclusions it draws, this important collection says much about the lasting influence of the work of Terry Copp. Foreword by John Cleghorn.
