This book is devoted to the issue of image super-resolution—obtaining high-resolution images from single or multiple low-resolution images. Although there are numerous algorithms available for image interpolation and super-resolution, there's been a need for a book that establishes a common thread between the two processes. Filling this need, *Image Super-Resolution and Applications* presents image interpolation as a building block in the super-resolution reconstruction process. Instead of approaching image interpolation as either a polynomial-based problem or an inverse problem, this book breaks the mold and compares and contrasts the two approaches. It presents two directions for image super-resolution: super-resolution with a priori information and blind super-resolution reconstruction of images. It also devotes chapters to the two complementary steps used to obtain high-resolution images: image registration and image fusion. Details techniques for color image interpolation and interpolation for pattern recognition Analyzes image interpolation as an inverse problem Presents image registration methodologies Considers image fusion and its application in image super resolution Includes simulation experiments along with the required MATLAB® code Supplying complete coverage of image-super resolution and its applications, the book illustrates applications for image interpolation

and super-resolution in medical and satellite image processing. It uses MATLAB® programs to present various techniques, including polynomial image interpolation and adaptive polynomial image interpolation. MATLAB codes for most of the simulation experiments supplied in the book are included in the appendix. Lists for 19 include the Mathematical Association of America, and 1955- also the Society for Industrial and Applied Mathematics. Paths to College and Career Jossey-Bass and PCG Education are proud to bring the Paths to College and Career English Language Arts (ELA) curriculum and professional development resources for grades 6-12 to educators across the country. Originally developed for EngageNY and written with a focus on the shifts in instructional practice and student experiences the standards require, Paths to College and Career includes daily lesson plans, guiding questions, recommended texts, scaffolding strategies and other classroom resources. Paths to College and Career is a concrete and practical ELA instructional program that engages students with compelling and complex texts. At each grade level, Paths to College and Career delivers a yearlong curriculum that develops all students' ability to read closely and engage in text-based discussions, build evidence-based claims and arguments, conduct research and write from sources, and expand their academic vocabulary. Paths to College and Career's instructional resources address the needs of all learners, including students with disabilities, English language learners, and gifted and talented students. This enhanced curriculum provides teachers with freshly designed Teacher Guides that make the curriculum more accessible and flexible, a Teacher Resource Book for each module that includes all of the materials educators need to manage instruction, and Student Journals that give students learning tools for each module and a single place to organize and document their learning. As the creators of the Paths ELA curriculum for grades 6-12, PCG Education provides a professional learning program that ensures the success of the curriculum. The program includes: Nationally recognized professional development from an organization that has been immersed in the new standards since their inception. Blended learning experiences for teachers and leaders that enrich and extend the learning. A train-the-trainer program that builds capacity and provides resources and individual support for embedded leaders and coaches. Paths offers schools and districts a unique approach to ensuring college and career readiness for all students, providing state-of-the-art curriculum and state-of-the-art implementation. "As with his weekly column, James Montier's Value Investing is a must read for all students of the financial markets. In short order, Montier shreds the 'efficient market hypothesis', elucidates the pertinence of behavioral finance, and explains the crucial difference between investment process and investment outcomes. Montier makes his arguments with clear insight and spirited good humor, and then backs them up with

cold hard facts. Buy this book for yourself, and for anyone you know who cares about their capital!" —Seth Klarman, President, The Baupost Group LLC

The seductive elegance of classical finance theory is powerful, yet value investing requires that we reject both the precepts of modern portfolio theory (MPT) and pretty much all of its tools and techniques. In this important new book, the highly respected and controversial value investor and behavioural analyst, James Montier explains how value investing is the only tried and tested method of delivering sustainable long-term returns. James shows you why everything you learnt at business school is wrong; how to think properly about valuation and risk; how to avoid the dangers of growth investing; how to be a contrarian; how to short stocks; how to avoid value traps; how to hedge ignorance using cheap insurance. Crucially he also gives real time examples of the principles outlined in the context of the 2008/09 financial crisis. In this book James shares his tried and tested techniques and provides the latest and most cutting edge tools you will need to deploy the value approach successfully. It provides you with the tools to start thinking in a different fashion about the way in which you invest, introducing the ways of over-riding the emotional distractions that will bedevil the pursuit of a value approach and ultimately think and act differently from the herd.

Virtual private networks (VPNs) based on the Internet instead of the traditional leased lines offer organizations of all sizes the promise of a low-cost, secure electronic network. However, using the Internet to carry sensitive information can present serious privacy and security problems. By explaining how VPNs actually work, networking expert Jon Snader shows software engineers and network administrators how to use tunneling, authentication, and encryption to create safe, effective VPNs for any environment. Using an example-driven approach, *VPNs Illustrated* explores how tunnels and VPNs function by observing their behavior "on the wire." By learning to read and interpret various network traces, such as those produced by tcpdump, readers will be able to better understand and troubleshoot VPN and network behavior. Specific topics covered include: Block and stream symmetric ciphers, such as AES and RC4; and asymmetric ciphers, such as RSA and ElGamal Message authentication codes, including HMACs Tunneling technologies based on gtnet SSL protocol for building network-to-network VPNs SSH protocols as drop-in replacements for telnet, ftp, and the BSD r-commands Lightweight VPNs, including VTun, CIPE, tinc, and OpenVPN IPsec, including its Authentication Header (AH) protocol, Encapsulating Security Payload (ESP), and IKE (the key management protocol) Packed with details, the text can be used as a handbook describing the functions of the protocols and the message formats that they use. Source code is available for download, and an appendix covers publicly available software that can be used to build tunnels and analyze traffic flow.

VPNs Illustrated gives you the knowledge of tunneling and VPN technology you need to understand existing VPN implementations and successfully create your own. In our era of mass electronic communications, political realities are produced by believable fictions that echo popular desires. Lists for 19 include the Mathematical Association of America, and 1955- also the Society for Industrial and Applied Mathematics. Provides more than 6,800 research facilities and programs of the U.S. and Canadian federal governments. Listings include e-mail and Web site addresses, and a wealth of descriptive information. When you cross an Oxford graduate with a young man seeking gold and adventure in the remote wilderness, the result is Nahanni Journals. In this fascinating account of Raymond Patterson, a Londoner who finds his destiny in the Nahanni and Flat Rivers region of the Northwest Territories, Richard C. Davis reveals to us an extraordinary life. Patterson's adventures are as swift and unpredictable as the river he canoes. Outdoor enthusiasts, historians, lovers of travel, and anyone interested in captivating stories will enjoy accompanying Patterson for the ride. "What are the lives of trees, of conifers, like? How do seedlings establish and develop into saplings? How do some seedlings stay alive for decades, marking time in the deep shade of the forest? How do the distinctive forms of saplings of the different species arise? When, how, and where do cones come from? What is the sex life of a conifer? Where does pollen come from? What does pollen do?" A comparative account of the coniferous trees indigenous to Northeastern North America. Extensively illustrated with full-colour photographs, diagrams, and drawings by the author, Graham R. Powell's *Lives of Conifers* examines the complex and fascinating life cycles of the 12 coniferous trees that grow naturally in northeastern North America on both sides of the Canada-U.S. border. Tracing their development from seeds and seedlings, to saplings, through the pole stage to maturity, old age, and death, the book is designed to provide a comparison of each species at each stage of life, thus aiding in the recognition and identification of species at all stages of their existence. It includes descriptions of developmental processes and how they differ among the species. The species covered in the book are: the balsam fir, eastern hemlock, tamarack larch, eastern white pine, jack pine, pitch pine, red pine, black spruce, red spruce, white spruce, eastern juniper, and eastern thuja. The book is based almost entirely on what is visible to the careful observer in the forest, and includes only the parts of trees that can be seen above ground. *Lives of Conifers* will appeal to forest scientists, forestry students, foresters, forest technologists, botanists, horticulturists, arborists, naturalists, and general readers interested in knowing more about their natural surroundings. The Chief Biostatistician Passbook(R) prepares you for your test by allowing you to take practice exams in the subjects you need to study. It provides hundreds of questions and answers in the areas

that will likely be covered on your upcoming exam, including but not limited to: planning, conducting and evaluating research studies; descriptive and inferential statistics; understanding and interpreting material presented in tabular form; administrative supervision; and more. “ Stressed-out readers will find her advice a salve in an overly hurried and critical world. ” —Publisher ’ s Weekly "Jessie Asya Kanzer is like a Taoist Anne Lamott, and she's written a practical and actionable guide." —Joel Fotinos, author of The Prosperity Principles Here are 47 inspirational pieces that are smart, hip, accessible, and rich with insight; Jessie Asya Kanzer ’ s bite-sized stories of struggle, triumph, and contemplation provide a quick burst of mindfulness. Each chapter begins with a verse from the Tao, followed by sharp observations and anecdotes from her own life that give the teachings of Lao Tzu applicability to contemporary life. And each chapter concludes with a “ Do Your Tao ” section that offers an actionable step, leaving the reader with a sense of grounding and fluidity. Chapters include: “ Success Sucks (Sometimes), ” “ F*ck This, I'm Water, ” “ I Love You, I Not Love You, ” “ The Tao of Babushka,” and “ Mystics Wear Leggings ” .

Pattern recognition is the extraction of consistent information from noisy spatiotemporal data. It can be and is currently being used in systems for battlefield supervision, smart weapons, and anti-counterfeiting of all kinds. A current application is the automatic detection of land mines and unexploded ordnance. (UXO). The methods employed can be subdivided in the following manner: (1) statistical methods, (2) neuro - methods, (3) fuzzy - methods, and (4) neuro fuzzy methods. Each of these methods has its special advantages and drawbacks, but all of them require the computation of feature variables from measurement or simulation data, e.g. from microwave backscattering. The Lecture series covers the following topics: (1) Introductory overview on pattern recognition techniques, (1) - (4); (2) Feature extraction for pattern recognition by; (a) Electromagnetic, magnetic, and acoustic singularity identification; (b) Model based scattering signatures; (c) Wavelet techniques; (d) SAR/ISAR imaging; (e) Bistatic microwave imaging; and (f) Electromagnetic inversion techniques; (3) Real-time implementation of pattern recognition methods; and (4) Introduction to software and hardware for pattern recognition.

Definitive guide to implementing, managing and troubleshooting Linux networks. Detailed coverage of Linux routing, file management, directory services, security and internetworking with Samba. This vastly expanded 2nd edition contains all the new developments since 1985. It describes significant new phenolic resin chemistry, new applications with up-to-date developments, and includes detailed standardized test methods important for ISO 9001 ff certification. Among the many topics covered in this handy, pocket-sized guide are air and gases, carpentry and construction, pipes,

pumps, computers, electronics, geology, math, surveying and mapping, and weights and measures. Includes tables, charts, drawings, lists & formulas. This text describes the functions that the BIOS controls and how these relate to the hardware in a PC. It covers the CMOS and chipset set-up options found in most common modern BIOSs. It also features tables listing error codes needed to troubleshoot problems caused by the BIOS.
